# fuchs_N10#2: N = 10, k = 3, orientable, 1 extremal 3-packing

packing 1: 3 points drawn (one disc centred at distance 0.0 from O)
isometry group of order 2: 2 conformal automorphisms and 0 anticonformal ones; 2 induced by the triangle group
0 anticonformal involutions with mirrors; 0 nontrivial isometries without fixed points
check: chi(X/Aut+) = 2, chi(X/Isom) = 2 (must be integers; the first one even)
edges with the same number are identified; n~ = orientation reversing pairing; points on the boundary of the domain appear at each of their copies
