fuchs_N10#9: N = 10, k = 3, orientable, 2 extremal 3-packings

packing 1: 3 points drawn (one disc centred at distance 0.0 from O)
packing 2: 5 points drawn (one disc centred at distance 1.06128 from O)
isometry group of order 8: 4 conformal automorphisms and 4 anticonformal ones; 4 induced by the triangle group
3 anticonformal involutions with mirrors; 1 nontrivial isometries without fixed points
check: chi(X/Aut+) = 2, chi(X/Isom) = 1 (must be integers; the first one even)
edges with the same number are identified; n~ = orientation reversing pairing; points on the boundary of the domain appear at each of their copies
