fuchs_N12#25: N = 12, k = 2, orientable, 1 extremal 2-packing

extremal 2-packings

isometries: fixed points and mirrors

packing 1: 2 points drawn (one disc centred at distance 0.0 from O)
isometry group of order 16: 8 conformal automorphisms and 8 anticonformal ones; 16 induced by the triangle group
4 anticonformal involutions with mirrors; 4 nontrivial isometries without fixed points
check: chi(X/Aut+) = 2, chi(X/Isom) = 1 (must be integers; the first one even)
edges with the same number are identified; n~ = orientation reversing pairing; points on the boundary of the domain appear at each of their copies
