fuchs_N7#56: N = 7, k = 12, orientable, 1 extremal 12-packing

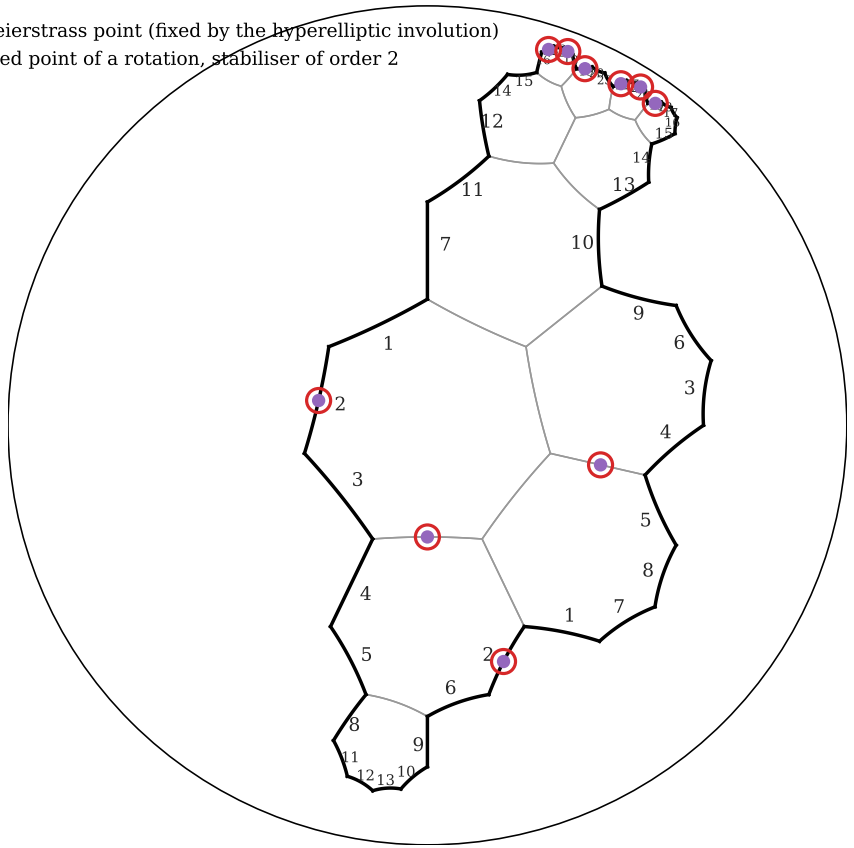

extremal 12-packings

● packing 1 (uniformization)

isometries: fixed points and mirrors

○ Weierstrass point (fixed by the hyperelliptic involution)
● fixed point of a rotation, stabiliser of order 2

packing 1: 12 points drawn (one disc centred at distance 0.0 from O)
isometry group of order 4: 2 conformal automorphisms and 2 anticonformal ones; 4 induced by the triangle group
0 anticonformal involutions with mirrors; 2 nontrivial isometries without fixed points
check: chi(X/Aut+) = 2, chi(X/Isom) = 1 (must be integers; the first one even)
edges with the same number are identified; n~ = orientation reversing pairing; points on the boundary of the domain appear at each of their copies
