fuchs_N9#5: N = 9, k = 4, orientable, 1 extremal 4-packing

packing 1: 4 points drawn (one disc centred at distance 0.0 from O)
isometry group of order 4: 2 conformal automorphisms and 2 anticonformal ones; 4 induced by the triangle group
0 anticonformal involutions with mirrors; 2 nontrivial isometries without fixed points
check: chi(X/Aut+) = 2, chi(X/Isom) = 1 (must be integers; the first one even)
edges with the same number are identified; n~ = orientation reversing pairing; points on the boundary of the domain appear at each of their copies
